

BULK TRAILER COMPACTORS

INTRODUCTION

Keljay's range of bulk trailer compactors have been developed to gain maximum waste trailer weight on a huge range of varying waste products. Bulk trailer compactors pack directly into a bulk lorry trailer rather than a conventional 32-yard

waste container and therefore dramatically increasing the amount of waste that can be compacted and stored before it needs to be taken away thus exponentially reducing waste transport costs.

HD BULK BLADE COMPACTOR

Keljay's range of bulk trailer compactors have been developed to achieve maximum throughput and to utilize the full carrying capacity of a bulk trailer. This type of equipment can be used on a huge range of varying waste products. The images to the right show our latest bespoke model, this was specially designed to accommodate access onto the back of the machine via a rear ladder, along with a customised hopper to allow off the dock loading.

OPTIONAL EXTRAS

XHD upgrade including dual cylinders for increased compaction force, auto start, bespoke, audible alarm system, increased cycle time, telemetry pack, key exchange safety systems, trailer guides and stops.

AVAILABLE LOADING OPTIONS

To increase efficiency and to reduce manual handling a range of loading options are available such as:

- Bin lift systems
- Through-the-wall chutes
- Conveying systems
- Air systems
- Walk on loading platforms

BENEFITS

- Maximize amount of waste collected per visit
- Dramatically reduces waste collections
- Bespoke solutions available
- Fully CE compliant
- Ideal for very large volumes of waste
- Low maintenance
- Can be integrated into production processes and compaction equipment

HD BULK SCREW COMPACTOR

The HD Bulk screw compactor has all the great features of the standard HD Screw Compactor but on a larger scale. Specifically designed for large volumes of waste material, the bulk screw compactor has been extremely successful on waste products such as crisps.
